

Grape Harvester

This belt is used for grape harvesting in vineyards larger than 100 acres that require mechanical harvesting. The belt is available for replacement belting on OEM harvesting equipment imported from overseas, on harvesters supplied by the OEM, ERO who we supply in Europe, as well as the harvesters from OEM's in France.

These belts are fabricated with our belt type 32-11. We can also supply the belts on 150Lb. Black solid woven PVC for replacement on domestic harvesters. As the leaves on the vines have a tendency to stick to the belt surface requiring valuable clean up time, we have installed a small rectangular cleat in between the curved cleats which helps eliminate this problem and reduce the clean up time.
